

## Orchestra

# Expert Integration Services, Powered by AI *and* an Enterprise iPaaS

**Orchestra** pairs AI agents with Forward Deployed Engineers (FDEs) to deliver integrations as outcomes—designed, built, tested, and documented for scale.

Our digital labor team develops and manages integrations using the Lingk iPaaS—replacing or supplementing your internal IT team. This services and technology approach helps institutions modernize their integrations affordably and quickly.

**Faster delivery • Lower total cost • Enterprise-grade quality • Built to scale**

## How it works

### Each phase

- 1** Map out integration project roadmap with expert guidance
- 2** We obtain necessary artifacts for integrated target objects
- 3** Our team of AI agents guided by human integration specialists design, develop, test and deliver integrations for your institution

# Imagine the Possibilities with Digital Labor

Lingk Professional Services is uniquely positioned to help institutions build a unified data architecture with any systems.

## AI Agents

Lingk accelerates integration project timelines with digital labor that analyzes your *artifacts*—such as sample data, API details, and a short list of requirements—to develop complete, working integrations in minutes instead of months.

Lingk's AI is trained on our own low-code integration language, allowing customers to no longer need to map data fields, write code, or manage technical details.

## Forward Deployed Engineers (FDEs)

Embedded with your team, Lingk's Forward Deployed Engineers (FDEs) guide our AI Agents from Discovery to Go-Live—ensuring integrations are accurate, and aligned with your goals.

FDEs bring hands-on integration expertise while orchestrating and overseeing the AI-driven delivery process. They meet regularly with your team to understand unique data models, business processes, and schemas—translating those insights into clear direction for the AI Agents that execute the work.

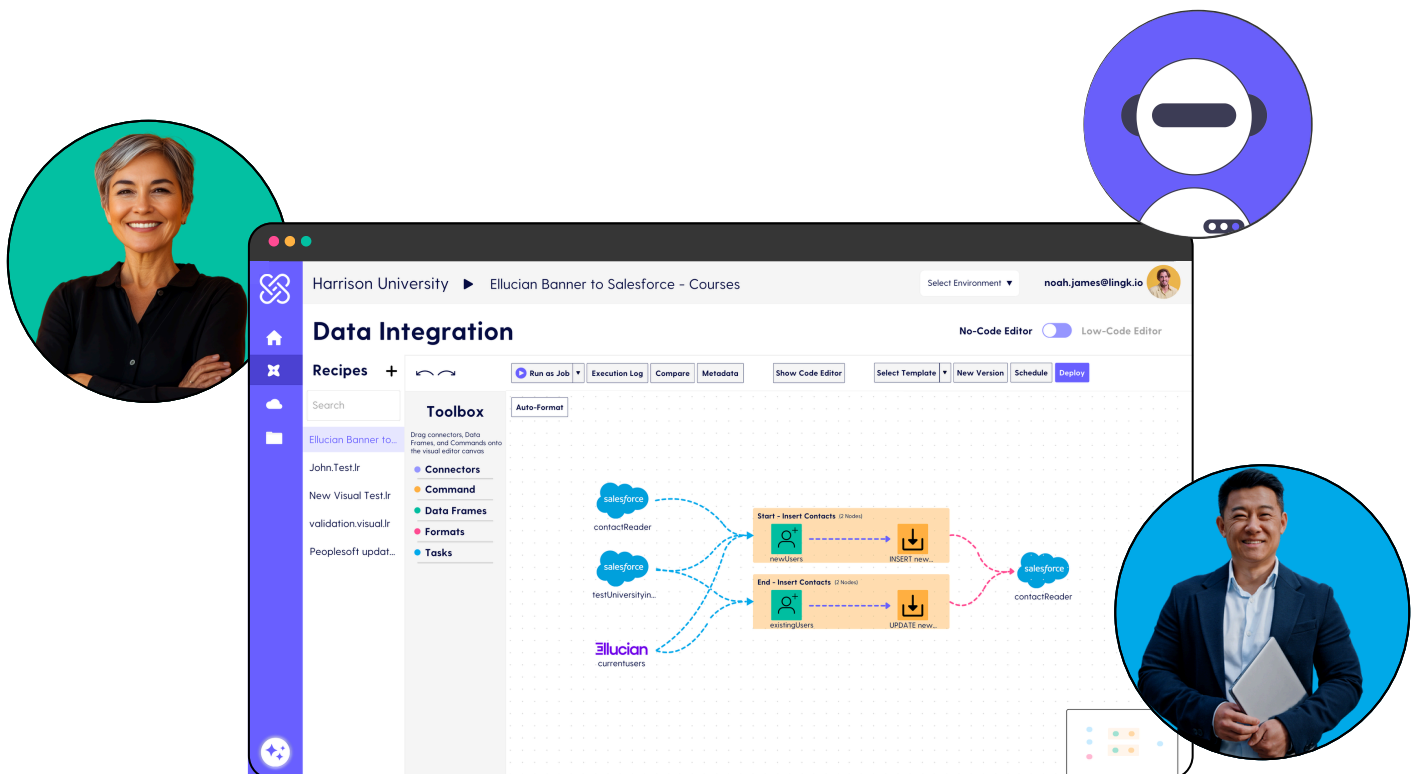

They deliver outcomes, not billable hours, helping projects move faster with less risk. FDEs can supplement or replace scarce IT capacity, allowing your staff to stay focused while integrations ship faster and work the first time.

## Enterprise iPaaS

**Rhythm** is Lingk's enterprise integration platform and it comes with our services.

Our integration platform delivers real-time pipelines and transformations that unify systems (cloud and on-prem) into a single, consistent flow.

Powered by a serverless Apache Spark engine, Rhythm scales to billions of rows in seconds. With schedules, event triggers, retries, duplicate prevention, and real-time alerts—plus end-to-end observability our team delivers robust integrations that scale.

**We don't have the bandwidth to solve these integration challenges on our own. Lingk enables us to achieve our integration objectives affordably and sustainably."**

Dr. Joel Musgrove  
Senior EVP Operations, American National University
